The second law of thermodynamics establishes the concept of entropy as a physical property of a thermodynamic system. Entropy predicts the direction of spontaneous processes, and determines whether they are irreversible or impossible, despite obeying the requirement of

Traditionally, thermodynamics has stated three fundamental laws: the first law, the second law, and the third law. [1] [2] [3] A more fundamental statement was later labelled the 'zeroth law'. The law of conservation of mass is also an equally fundamental concept in the theory of thermodynamics, but it is
